

HAS YOUR WATER BEEN TESTED RECENTLY?

Domestic water well testing is done to:

1. Ensure you have safe drinking water.
2. Test for contaminants to evaluate the need for treatment .
3. Establish a record that will help you determine if the quality of you water has changed.

COSTS:

Water Analysis: \$10.00 per well.

Includes inspection of the site.

Testing is for:

Bacteria—presence or absence

Nitrate level.

Planning and design of wastewater/
septic system free.
